ASA Statement on Student Evaluations Sparks Conversation
In response to the growing body of research showing that student evaluations of teaching (SETs) are weakly related to student learning and systemically disadvantage faculty from marginalized groups, ASA released a statement with 17 other scholarly organizations calling on institutions to rethink how they use SETs and providing alternative models for a more holistic approach to assessing faculty teaching effectiveness. The statement has generated conversations on campuses, on social media, and in the higher education press. Read the coverage in Inside Higher Education.
